

SIMULASI UTS

Petunjuk umum:

1. Berdoalah sebelum mengerjakan.
2. Dilarang untuk menggunakan media komunikasi (handphone, internet) selama ujian berlangsung.
3. Dilarang untuk melakukan tindakan curang : mencontek, menjiplak, dan bertanya mengenai konfigurasi dan jawaban kepada pengawas.
4. Dilarang keluar ruangan selama ujian berlangsung.
5. Dilarang untuk saling meminjam alat tulis dan tip-ex .
6. Seluruh jawaban dikerjakan pada lembar ini (dapat mempergunakan lembar belakang lembar jawaban, beri nomor).

1. You are giving a short presentation on Artificial Intelligence to beginner Informatics students. Describe how you would structure the presentation and how you would keep the audience engaged using your voice and body language (30 point).

MODEL ANSWER:

If I give a short presentation about *Artificial Intelligence (AI)* to new Informatics students, I will divide it into three parts: introduction, main content/discussion, and conclusion.

First, in the introduction, I will greet the students with a smile. I will ask, *"Have you ever used Google Assistant or Face ID?"* This question helps them connect with the topic. Then, I will say, *"These are examples of Artificial Intelligence."*

Second, in the main part, I will explain what AI is using simple words. I will say, *"AI is a technology that helps machines think like humans."* I will give 2–3 examples like chatbots and self-driving cars. I will speak slowly and clearly. I will use my hands to point at pictures or slides. I will also ask, *"Is it clear?"* to check if they understand.

Last, in the conclusion, I will repeat the key points. Then, I will ask a question like, *"Can AI help teachers in the future?"* This makes them think more. I will finish by saying thank you and smiling again.

During the whole talk, I will use a clear voice, good eye contact, and open body language to make my presentation interesting and easy to understand.
